Project
Online Test Application

Project Objective & Background:

The Online Test Application system creates an application that enables users to provide online tests, review them, and display the results.

Developer Details:

Name: Snehal Pardeshi **Simplilearn UserId:** Snehalvp2000@gmail.com

Product Features:

system contains three main modules: Quiz, Review, and Result. The quiz section of the online test application accepts the questions in JSON format. The JSON file can be easily shared from the server in the pre-defined format. The application renders the test at the client-side.

The "Review and display result" section allows users to declare the results immediately. You can simply call another JSON with the answers in it and evaluate and display the results immediately.

Sprint Planning and Task Achieved:

Number of sprint planned = 2

Sprint 1:

1. Planned to develop the rest api's for features regarding user. Successfully developed and tested the customer user rest api's using JSON.
2. Planned to develop the rest api's for features regarding user. Successfully developed and tested the user rest api's using JSON.
3. Planned to develop the frontend view for user. Successfully developed the Test and other features for user.

Sprint 2:

1. Planned to test the complete web application by giving the required inputs in respective fields.
2. Successfully tested the login logout, Review and Result features.
3. The Web application is responsive, secure and all features are working as per the given requirements.
